---

WORK EXPERIENCE

I. DevOps Engineer at GC Technologies Kenya **November 2025-September 2026**

- Owned production systems across distributed Linux servers and containerized workloads, handling deployments, configuration, networking, and day-to-day production operations.
- Built self-serve CI/CD pipelines with GitHub Actions including self-hosted runners, Jenkins, and GitLab CI/CD, letting teams test, build Docker images, and ship releases without manual intervention.
- Built self-serve infrastructure with Terraform, codifying cloud and server provisioning so environments could be created consistently, repeatably, and from version control.
- Improved reliability and scalability of internal services by connecting geographically distributed servers over a private Tailscale network, enabling secure node-to-node deployments, monitoring, and service communication without public exposure.
- Implemented monitoring, logging, and alerting with Prometheus, Grafana, Loki, and ELK, surfacing application and infrastructure issues early and cutting time to resolve production incidents.
- Secured production environments with SSL/TLS, firewall policies, server hardening, secrets management, and controlled administrative access.

II. DevOps Engineer & Backend Developer at Ijambo (Contract) **February 2026 – July 2026**

- Developed and owned the production backend, maintaining Spring Boot services on PostgreSQL and Redis, including REST APIs, business logic, authentication, scheduled jobs, and background processing.
- Designed relational data models and PostgreSQL schemas that turned business requirements into maintainable services and data-access workflows.
- Boosted performance and scalability with Redis caching and asynchronous background workers, keeping scheduled and long-running workloads off the request path.
- Automated the release process with CI/CD pipelines covering test runs, Docker image builds, container registry publishing, and production deployments.
- Administered an eight-container production environment on VPS infrastructure, managing networking, DNS, SSL/TLS, Nginx, and firewalls.
- Hardened the application and infrastructure with HTTPS, Cloudflare, CSP, CORS/CSRF policies, Nginx configuration, and firewall rules.
- Established health checks, monitoring, and deployment validation that raised service reliability, with automatic recovery of every service after reboots.

III. Full-Stack Software Engineer& System Design at RWAiGHT **October 2023 - October 2025**

- Architected and developed scalable Spring Boot microservices with resilient communication patterns, fault tolerance, and high availability.
- Designed event-driven and data integration solutions using Kafka, PostgreSQL, and Redis to support reliable, low-latency workflows.
- Developed secure REST APIs with authentication, authorization, input validation, and performance optimization.
- Developed Angular/TypeScript frontend applications integrated with Spring Boot REST APIs, implementing reusable components, authentication flows, routing, and responsive user interfaces.
- Led end-to-end system design, deployment, monitoring, and operational support for distributed backend services and client-facing applications.
- Established CI/CD pipelines and engineering quality standards using GitHub Actions, Docker, JUnit, Mockito, and SonarQube to improve deployment reliability and code maintainability.

EDUCATION

Bachelor of Science in Information Technology

Adventist University of Central Africa 2024

Relevant Courses: Java Programming, Data Structure and Algorithm, Linux Administration, Operating Systems, Software Engineering, Software Quality Assurance, Software Testing Techniques.

CORE COMPETENCIES

- **Programming Languages:** Java, Python, C, Bash/Shell Scripts
- **Frameworks:** Spring Boot, NestJS, Django, Angular, NextJS
- **Cloud & DevOps:** Docker, GitHub Actions, Terraform, Kubernetes, ArgoCD, Grafana, Netdata, TailScale**,** Floci
- **Database:** PostgreSQL, MySQL, MongoDB, Redis

CERTIFICATES

- AWS Certified Solutions Architect – Associate SAA-C03 (In Progress)
- Advanced Network Operations 2.0 – Internet Society (2024)
- Linux Essentials Professional – Cisco Networking Academy (2022)
- Information Security – freeCodeCamp (2025)
- Certified Software Engineer – micro1 (2026)
- Backend Development and APIs Certificate – freeCodeCamp (2025)
- JavaScript Algorithms and Data Structures – freeCodeCamp (2025)
- Data Analysis with Python – freeCodeCamp (2025)
