NIYONZIMA NSHUTI FABRICE

Full Stack Software Engineer & DevOps | Cloud Infrastructure

+250780484427 | nshuti.fabrice09@gmail.com | github.com/nshutifabrice09 | Kigali, Rwanda

WORK EXPERIENCE

I. DevOps Engineer at GC Technologies Kenya **November 2025-September 2026**

- Designed and maintained CI/CD pipelines using GitHub Actions, Jenkins, and GitLab CI/CD to automate application testing, Docker builds, deployments, and release processes.
- Provisioned and managed cloud and server infrastructure with Terraform, applying Infrastructure-as-Code practices to create consistent, repeatable, and version-controlled environments.
- Managed Linux servers and containerized workloads, supporting application deployments, configuration, networking, and production operations.
- Implemented monitoring, logging, and alerting using Prometheus, Grafana, Loki, and ELK to track application and infrastructure health and troubleshoot production issues.
- Implemented production security and access controls, including SSL/TLS configuration, firewall policies, server hardening, and secure administrative access.
- Troubleshot deployment, networking, application, and infrastructure issues across development and production environments, improving system reliability and operational stability.
- Maintained and optimized production environments, focusing on availability, performance, observability, and reliable application delivery.

II. DevOps Engineer & Backend Developer at Ijambo (Contract) **February 2026 – July 2026**

- Developed and maintained backend services using Spring Boot, PostgreSQL, and Redis, implementing RESTful APIs, business logic, authentication, scheduled jobs, and background processing workflows.
- Designed and implemented REST APIs and backend integrations, applying structured service-layer architecture, request validation, error handling, authentication, and API testing across development and staging environments.
- Designed relational data models and PostgreSQL schemas, translating business requirements into maintainable backend services and data-access workflows.
- Implemented Redis-based caching and asynchronous/background processing to improve application performance and support scheduled workloads.
- Built and maintained automated testing and CI/CD pipelines, integrating application testing, Docker image builds, container registry publishing, and production deployments.
- Administered containerized production environments and VPS infrastructure, managing networking, DNS, SSL/TLS, Nginx, firewalls, and application deployments.
- Implemented application and infrastructure security controls, including HTTPS, Cloudflare, CSP, CORS/CSRF policies, Nginx configuration, and firewall rules.
- Established monitoring, health checks, and deployment validation to improve backend service reliability and production stability.

III. Full-Stack Software Engineer& System Design at RWAiGHT **October 2023 - October 2025**

- Architected and developed scalable Spring Boot microservices with resilient communication patterns, fault tolerance, and high availability.
- Designed event-driven and data integration solutions using Kafka, PostgreSQL, and Redis to support reliable, low-latency workflows.
- Developed secure REST APIs with authentication, authorization, input validation, and performance optimization.
- Developed Angular/TypeScript frontend applications integrated with Spring Boot REST APIs, implementing reusable components, authentication flows, routing, and responsive user interfaces.
- Led end-to-end system design, deployment, monitoring, and operational support for distributed backend services and client-facing applications.
- Established CI/CD pipelines and engineering quality standards using GitHub Actions, Docker, JUnit, Mockito, and SonarQube to improve deployment reliability and code maintainability.

EDUCATION

Bachelor of Science in Information Technology
Adventist University of Central Africa 2024
Relevant Courses: Java Programming, Data Structure and Algorithm, Linux Administration, Operating Systems, Software Engineering, Software Quality Assurance, Software Testing Techniques.

CORE COMPETENCIES

- **Programming Languages:** Java, Python, C, Bash/Shell Scripts
- **Frameworks:** Spring Boot, NestJS, Django, Angular
- **Cloud & DevOps:** Docker, GitHub Actions, Terraform, Kubernetes, ArgoCD, Grafana, TailScale
- **Database:** PostgreSQL, MySQL, MongoDB, Redis

CERTIFICATES

- Backend Development and APIs Certificate – freeCodeCamp (2025)
- JavaScript Algorithms and Data Structures – freeCodeCamp (2025)
- Information Security – freeCodeCamp (2025)
- AWS Certified Solutions Architect – Associate (SAA-C03) – *In Progress*
- Advanced Network Operations 2.0 – Internet Society (2024)
- Linux Essentials Professional – Cisco Networking Academy (2022)
